

Electronic fan speed controller with TK

The EVSS1 electronic speed controllers automatically control the speed of single-phase voltage controllable electric motors (230 VAC / 50–60 Hz). These units are equipped with Modbus RTU (RS485) communication, an alarm relay output and thermal contacts to provide overheating protection of motors with cut-out contacts. The EVSS1 controllers feature a wide range of functionalities: remote control options, adjustable off level, min. and max. output voltage settings, time-limited motor operation initiated by a logic or switch signal.

Operating modes

Off level disabled

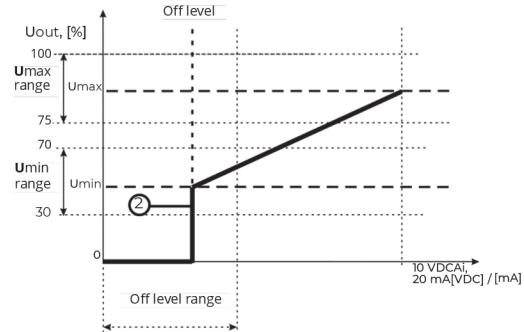

Descending mode calculation formula

$$U_{out} = U_{max} - \frac{A_i}{A_{imax}} (U_{max} - U_{min})$$

Ascending mode calculation formula

$$U_{out} = U_{min} + \frac{A_i}{A_{imax}} (U_{max} - U_{min})$$

Off level enabled

Descending mode calculation formula

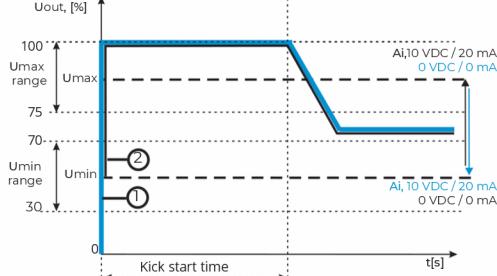

$$U_{out} = U_{max} - \frac{A_i - Offlevel}{A_{imax} - Offlevel} (U_{max} - U_{min})$$

Ascending mode calculation formula

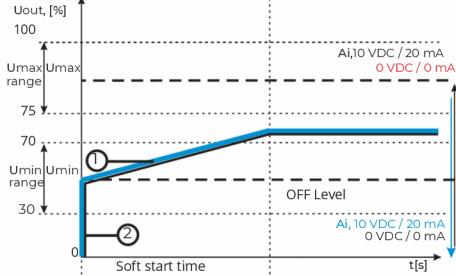

$$U_{out} = U_{min} + \frac{A_i - Offlevel}{A_{imax} - Offlevel} (U_{max} - U_{min})$$
